# LUMICHRON
COMMERCIAL CLOCKS

CLOCK SET-UP PROCEDURE TYPE TEMPUS

Once everything is installed, wired, and hands are mounted, you will need to set the position of the actual hands (called Tower Clock) in the master clock controller:

Note: Once the controller is energized, the clock will start to 'tick', and upon entering the Tower Clock screen (see below), it will pause, allowing you to set the time.
After leaving the Tower Clock screen, it will start ticking again.
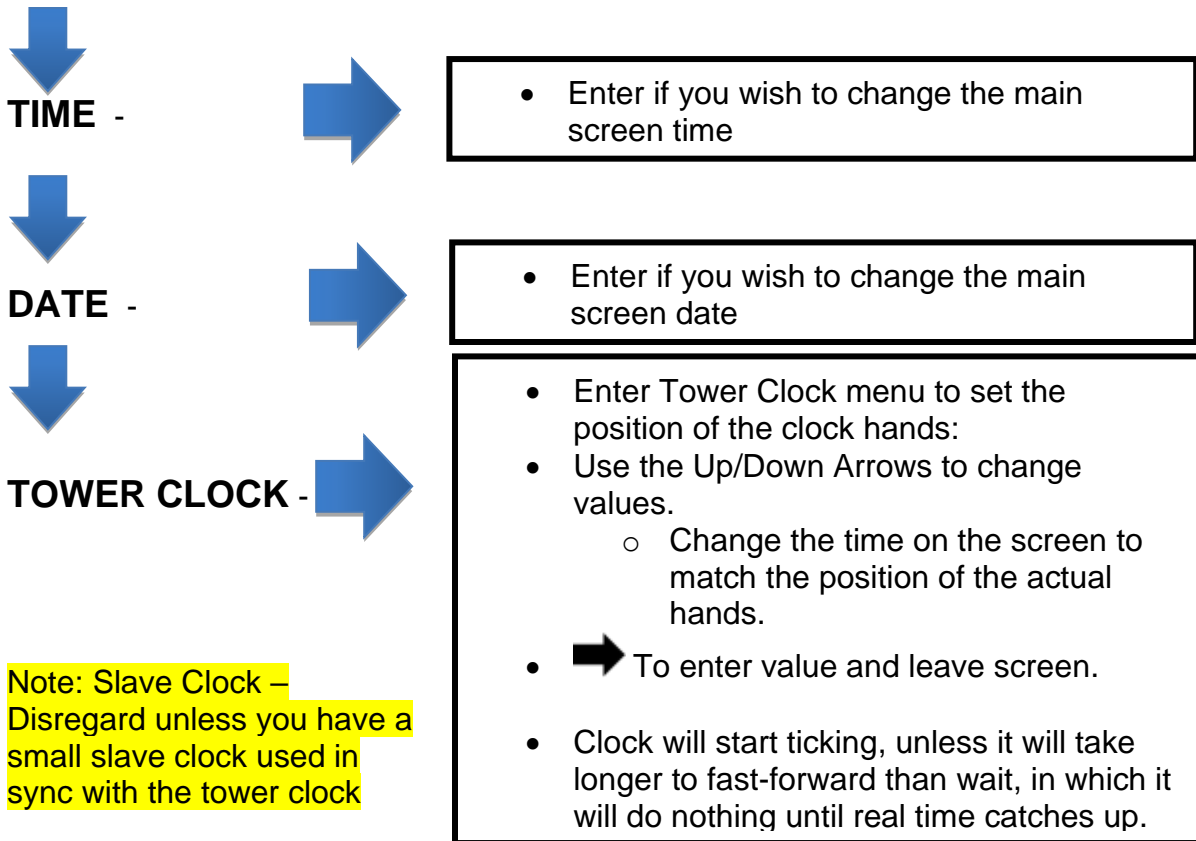

Basic control functions:

- To enter a screen, scroll right, and save your entry.
- To return to prior screen without saving.
- To scroll through menus & change values.

To Set the Time on the Clock Hands
(starting from main screen which displays current time and date):

TIME -
- Enter if you wish to change the main screen time

DATE -
- Enter if you wish to change the main screen date

TOWER CLOCK -
- Enter Tower Clock menu to set the position of the clock hands:
- Use the Up/Down Arrows to change values.
  o Change the time on the screen to match the position of the actual hands.
- ➡ To enter value and leave screen.
- Clock will start ticking, unless it will take longer to fast-forward than wait, in which it will do nothing until real time catches up.

Note: Slave Clock – Disregard unless you have a small slave clock used in sync with the tower clock
