

LUMICHRON POST / STREET CLOCKS

Lumichron Post/Street Clocks feature a free-standing two or four-faced clock on a post for bolt-down installation onto a concrete foundation similar to a light pole. Traditional or Modern styled, with a variety of heights and head sizes, fully automatic time controls with internal back-lit illumination.

BENEFITS OF POST / STREET CLOCKS

An outdoor post/street clock is a great way to enhance a street-scape or park environment where people congregate and walk. A post clock is really an *Outdoor Time Feature Sculpture* which adds comfort and importance to a special area. With a header panel and/or a dial, it can easily be customized for naming for such things as memorials, cities, parks, dates, etc. Often it is the highlight of a project.

INSTALLATION

Typically a foundation is poured with bolts for the clock, similar to a light pole, with 120v power up through the center, typically performed by the site electrician. Site-specific engineering drawings are available or the clock can be bolted-down to an existing pad if thought suitable. If electrical service cannot be delivered, self-setting DD lithium industrial clock movements can be substituted.

STANDARD FEATURES

- Cast/fabricated all-aluminum post and head
- Finished in Architectural grade powder coating, hammer black, silver, bronze or green (black is the default color)
- Tempered glass crystals which don't haze and are very durable
- Fully automatic clock controls which reset automatically for DST changes and power interruptions
- Back-lit dial with warm (or cool, depending on the dial style) white LED's
- Illumination control by the masterclock - on/off dusk/dawn, self-adjusting
- Header panels (if applicable) with custom text
- Customizable dials
- Modern style head (24", 30", 36" or 42") can be sized with post heights
- Gold or silver pin-striping on the bezels

CONSIDERATIONS WHEN ORDERING

- Viewing distance and angles for 2 or 4 faces
- Power supply requirements
- Foundation requirements
